

- Rugged Design
- Simple to Operate
- Easily Transportable

MUD SKIP WEIGHING SCALES

Robust, simple to operate, and far more accurate than relying on the crane load-indicator, Harran's Mud-Skip Weigh-Scales are designed for easy shipping to and from offshore installations, and to provide extended periods of use in the North Sea's harsh offshore environment.

- Design weighing capacity: 20,000 Kilos
- Working weighing capacity: 10,000 Kilos
- Platform Area: 2100 mm wide x 2440 mm long. Platform will accommodate all known sizes of mud cutting skips currently on the market.
- Overall dimensions: 2150 mm wide x 2850 mm long. Designed to be shipped in 8' wide half heights
- Total weight of Unit: 1000 Kg.
- Number of Load cells: Four (4)
- Load cell Type: Hydrostatic with 100% overload each unit
- Design accuracy: ±1% at working load (see above)
- Load Indicator: Reset feature for tare weight and zero. Load indicator is mounted on separate support clear of platform complete with dial face protective enclosure.
- Lifting: Forklift pockets in bottom skid. Four lifting points at top of bottom skid complete with four-leg wire rope sling
- Construction: All welded steel box section with locating points built into the units to facilitate "stacking" on location.
- Safety Features:
 - a) Zone 1 rated
 - b) Unit will not separate during use or transit
 - c) Constructed to withstand "point loading"
 - d) Supplied ready to use - no on-site set-up.
